

# *TVA Electric Power Rate Options*

## **Rate Options**

### **Firm Power**

This option means you have electricity available 24 hours a day. Contracts range from one to 10 years and are related to complexity of service.

### **Flat Price Interruptible Power**

SIC-qualified customers who can curtail load quickly during periods of high demand may be eligible for this option. The customer must have electric load above 1,000 kilowatts.

### **Small Manufacturing Credit**

This option helps small manufacturers remain viable by offering credits when demand for a month exceeds 1,000 kW.

### **Data Centers**

The TVA Board approved a change in TVA's manufacturing rate classification to help retain and attract data centers and similar businesses to the Tennessee Valley. Under the change, data centers are eligible for TVA manufacturing rates if they have a power demand in excess of 5 megawatts and operate at an average of at least 80 percent of this demand.
